in the last two decades the biannual ecppm european conference on product and process modelling conference series has provided a unique platform for the presentation and discussion of the most recent advances with regard to the ict information and communication technology applications in the aec fm architecture engineering construction and

building information modeling bim or the process of generating and managing digital information about physical representations of constructions has been effectively adopted and benefited numerous civil engineering projects across the globe particularly in developed countries bim development and trends in developing countries addresses the philosophies and practices for improved application of bim in developing countries two case studies are presented in this reference one from malaysia and another representing sri lanka readers are given an introduction and background of the malaysian and sri lankan construction industry and a critical review of bim s philosophies development and applications in different stages of a construction project the authors present their recommendations on the way forward for bim practices articulated from the two perspectives namely academia and industrial bim practice the case studies in this book highlight the role of adequate bim software techniques and the importance of governmental support in facing building challenges at the moment bim development and trends in developing countries provides readers useful insights on the evolution of bim practice in emerging countries and is a unique report on two specific scenarios in bim development engineers architects urban planners and policy makers around the globe seeking to understand practical bim implementation and trends will find this reference invaluable

architectural engineering and construction aec industry has been using 4d construction models graphical illustration of the construction of a 3d building design with time as the 4th dimension for many years to improve an existing construction schedule by identifying inconsistencies and out of sequence activities reducing missing activities and improving the ability to communicate construction plan information in practice majority of the aec industry has been using a personal computer based monitor to view and analyze these models a study on investigating the potential benefits and challenges of using an immersive 3d virtual environment to view 4d models proved that by interactively generating construction schedule in the immersive virtual environment the construction professionals were able to identify design constructability sequencing and interdisciplinary interfacing issues which resulted in the construction professionals being able to develop a plan that resulted in a 28 savings to their original schedule the major shortcoming of these immersive virtual reality systems was the building information models bim had to be converted to a specific format before they can be visualized in the immersive virtual environments this study is an attempt to address the shortcomings of the previous version of the bim cave which had the control over the camera views for achieving an almost seamless immersive virtual environment by developing a new bim cave application which synchronizes timelining of 4d construction sequ in bim cave the new bim cave setup is run by a custom built application that makes use of the net api application programming interface of the commercially available bim application autodesk navisworks 2012 the objective of this research is to investigate the effectiveness potential benefits and challenges of timelining the 4d construction sequence in bim cave developed at texas a m university research methodology called phenomenological study the findings of this research specify that timelining the 4d construction sequence in bi cave has many potential benefits like better spatial perception which increases confidence of construction professionals over the schedule

better sequencing of construction activities better communication of schedule evaluating constructability issues and training the work force thus this research concludes that timelining the construction in bim cave is effective over visualizing 4d construction on a single screen some limitations mentioned in this research the electronic version of this dissertation is accessible from hdl handle net 1969 1 151003

building information modeling bim model contains information about structural architectural mep mechanical electrical and plumbing and other numerous components of a building among these components mep constitutes about 50 of the project cost and its design is relatively more complex because of the limited headroom available to locate these components the coordination of these systems involves locating and routing several subcomponents in a manner that satisfies different types of constraints the earlier version of bim computer aided virtual environment cave did not have provisions to show the overhead components of a bim model conventionally models had to be tilted to visualize the overhead components the process of tilting the models to look up is considered counterintuitive some of the popular caves developed by leading universities have a screen on top to show the overhead components but they have a major shortcoming with them the bim models had to be converted to a specific format before they can be visualized in the cave environments this study is an attempt to address the shortcomings of the previous version of the bim cave by suggesting a prototype setup with a 55 lcd screen on top of the existing three vertically placed lcd screens the addition of one more screen on top increases the vertical field of view that is the extent to which the user can see vertically in a bim model the new bim cave setup is run by a custom built application that makes use of the net api application programming interface of the commercially available bim application autodesk navisworks 2012 to control the camera views for achieving an almost seamless semi immersive virtual environment the main objective of this research is to validate the effectiveness of the new setup suggested by using a qualitative research methodology called phenomenological study semi structured informal interviews were conducted with the subject matter experts smes who are experienced in the field of bim to know about the differences in the user experience after adding a screen on top of the earlier bim cave setup the main idea behind this qualitative research technique is to develop an understanding of how the smes perceived the idea of looking up to see the overhead components of the bim model this thesis explains the steps followed to develop the modified bim cave setup in detail and findings of the qualitative study to know about the effectiveness of the
